

# 2nd Niger River Brücke

## **SHORT DESCRIPTION**

The 2nd Niger River Bridge in southern Nigeria consists of a 1.6 km long prestressed concrete superstructure, which is built using the incremental launching method, cantilevered cantilever construction and on falsework.

## **THE PROJECT**

The bridge connects Anambra State and Delta State. The superstructure is pre-tensioned using BBV L15 tendons, with a total of more than 2,000 t of prestressing steel being installed.

#### **SERVICES IN DETAIL**

Material and equipment delivery

Supervision

approx. 2,000 t prestressing steel

## **FACTS**

Location	zw. Anambra State und Delta State, Nigeria , Nigeria
Status	Under construction
Start of construction	January 2019
Completion	December 2021
Building owner	Federal Republic of Nigeria
Contracting entity	Julius Berger International
Planning	LAP

## **SERVICES**

Post-tensioning system
Bridge construction
